Azoxystrobin has systemic, translaminar and protectant properties and works by inhibiting fungal respiration and offers excellent disease control.

Amistar controls a broad-spectrum of fungal diseases in ornamental plant production that includes:

- Botrytis
- Black root rot
- Downy mildew
- Leaf spot
- Needle blight
- Needle casts
- Powdery mildew
- Rust
- Scab
- White blister

## Managing resistance

Where possible, rotate or mix with alternative mode of action fungicides, and build in cultural and biological controls.
